

Meridian Field Command

AI-powered construction management built for solar EPC contractors

Meridian centralizes schedule, quality, RFIs, punch lists, documents, materials, photos, safety, analytics, and closeout into one field-first platform - with AI products that automate planning, inspection templates, photo analysis, and turnover documentation.

PROBLEM

Solar EPC teams still manage high-value field execution with Excel schedules, scattered RFIs, manual inspection templates, email threads, and unorganized closeout files - creating preventable schedule, quality, and documentation risk.

SOLUTION

A purpose-built 18-module field command system for solar EPC, supported by modular AI tools: BuildIQ, InspectionIQ, SiteIQ, and CloseoutIQ.

VALIDATION + GTM

MVP complete and demo-ready. Current motion is founder-led sales through 50+ warm EPC contacts, targeted demos, first pilot conversion, and proof points that can scale into referrals, webinars, and repeatable sales.

MARKET + MOAT

Bottom-up wedge starts with solar EPC projects, then expands into BESS and broader infrastructure. Moat comes from vertical workflows, AI automation, and a learning loop that adapts to each contractor's real productivity data.
