

MERIDIAN FIELD COMMAND

AI-powered construction management for solar EPC

BUILT FOR THE FIELD. BY THE FIELD.

Solar growth, schedule pressure, and AI maturity are converging now

02

43.4 GW

utility-scale solar planned for 2026

Solar represents 51% of planned new U.S. generating capacity

\$369B

IRA clean energy incentives

Federal tailwinds continue to push solar, storage, and infrastructure

AI-ready

documents, drawings, photos, and specs

Production-grade document intelligence makes EPC automation possible now

Market pressure

EPC teams are taking on more megawatts, faster COD timelines, and larger LD exposure while managing fragmented field systems.

Technical shift

Modern AI can parse contracts, BOMs, drawings, specs, photos, and closeout documents into structured workflows.

Timing window

Generic platforms are horizontal. Solar EPC teams now need vertical field intelligence built around their project realities.

Meridian exists because the market is scaling faster than the tools solar teams use to manage it.

Most project management systems are reactive - Meridian is proactive

03

Traditional PM tools track what already happened: after the schedule slipped, after material went missing, after inspections failed, after closeout deliverables were late.

Meridian helps teams know what to do next BEFORE problems turn into rework, warranty claims, or liquidated damages.

The difference: reactive tracking vs. proactive field execution.

\$750K LD exposure

Manual schedules miss COD dates by weeks. \$5K-\$15K/day penalties add up fast.

40-60 hours

PMs rebuild schedules in P6 or Excel. Every NTP delay cascades through the timeline.

Quality chaos

Inspection templates are rebuilt from scratch while specs, drawings, and torque values are cross-referenced manually.

Document sprawl

RFIs in email. Photos in phones. Punch lists in Excel. Closeout scattered everywhere.

The status quo is not one competitor - it is the messy combination of 4-6 disconnected systems.

One field command system - plus AI products that create expansion revenue

04

Meridian Field Command centralizes solar EPC execution from NTP through closeout, with standalone AI tools that can also power premium modules inside the platform.

The Vision: Upload drawings, BOM, geotechnical reports, and contract specs -> the system tells field teams where to start, how many crews needed, what equipment and when, where risks are, and how dates adjust based on weather, labor, and actual production rates.

\$10K/mo

base platform
18-module field hub

+\$2K/mo

Build Planner AI
powered by BuildIQ

+\$2K/mo

Quality AI Premium
powered by InspectionIQ

Standalone

AI products
additional entry points

Field Command

Central hub for project controls, QA/QC, RFIs, documents, materials, photos, safety, analytics.

BuildIQ

AI planning: drawings/BOM/contract to schedule, cost forecast, and LD risk.

InspectionIQ

AI inspection templates: specs/drawings to torque values, embedments, and checks.

CloseoutIQ + SitelIQ

OCR closeout automation and photo analysis that syncs back to the command center.

The wedge is solar EPC. The larger ambition is AI-powered field execution for complex construction.

18 modules are built around the way solar projects actually run

05

A purpose-built operating system for field teams, project managers, quality leaders, and executives managing solar construction risk.

PLAN	CONTROL	EXECUTE	CLOSEOUT
Build Planner	Documents	Daily Reports	Punch List
Contracts	RFIs	Quality/QC	Corrective Actions
BOM	Submittals	Observations	Photos
Locations	Materials	Safety	Closeout Docs
Settings	Analytics	Team	Turnover

Solar EPC workflow: NTP -> planning -> field execution -> QA/QC -> punch -> closeout -> turnover

Product status: complete, demo-ready MVP with 18 integrated modules.

Each AI product creates standalone value. Inside Field Command, every use trains a contractor-specific operating model.

BUILDIQ

Planning AI
Drawings + BOM + contract -> schedules, forecast, LD risk

INSPECTIONIQ

Quality AI
Specs + drawings -> inspection templates, torque values, embedments

SITEIQ

Photo AI
Field photos -> estimates, issues, site context, progress signals

CLOSEOUTIQ

OCR AI
Closeout docs -> structured turnover records

PROPRIETARY LEARNING LOOP

Industry benchmarks -> actual crew productivity -> equipment efficiency -> site conditions -> contractor-specific forecasts

Project 1

Starts with industry benchmarks and solar EPC templates.

Projects 3-5

Learns each contractor's actual production rates and field patterns.

Compounding moat

Personalized AI advantage increases accuracy and switching costs.

Current validation

18-module functioning MVP - Complete React + Supabase stack, demo-ready

8 years operator experience - Quality Manager on \$250M+ utility-scale solar sites

Direct industry access - 50+ EPC contacts from field experience

Pricing validated - \$10K-\$14K/month competitive with Procore for this vertical

Next 180 days

Q2 2026

First pilot customer onboarded; target 1 paying project @ \$10K/month

Q3 2026

Expand pilot program; target \$10K MRR from 1-2 projects

Q4 2026

Repeatable onboarding playbook; target scale to 5-10 customers

\$120K gets Meridian from MVP to pilot validation to repeatable revenue

Project-level pricing creates premium ARPA with AI expansion

08

Pricing is designed around the economic reality of utility-scale projects: large budgets, high LD exposure, and heavy documentation requirements.

\$10,000

Base platform / month

Full 18-module suite - no AI premium tiers

+\$2,000

Build Planner AI / month

BuildIQ powers automated planning and risk forecasts

+\$2,000

Quality AI / month

InspectionIQ powers templates and field checks

TOTAL WITH DUAL AI: \$14,000 / PROJECT / MONTH

Enterprise-aligned

Comparable with Procore GC tiers, but purpose-built for solar EPC workflows.

Expansion path

Standalone AI tools act as entry points and upsell into Field Command.

Retention lever

Learning loop improves accuracy project over project, creating switching costs.

Solar EPC represents a \$4.2B+ TAM growing with clean infrastructure demand

09

TAM

\$4.2 BILLION

Total Addressable Market

All U.S. construction management software for:

- Utility-scale solar EPC
- BESS projects
- Data center infrastructure

Market tailwind: solar and storage dominate planned U.S. capacity additions.

SAM

\$1.3 BILLION

Serviceable Addressable Market

Solar EPC contractors managing 50MW+ projects:

- 1,200+ target customers
- Avg 2-5 concurrent projects
- \$10K-\$14K per project/month
- Typical project: 12-18 months

Bottom-up anchor:

1,200 x 3 projects x \$12K x 12 months = \$518M ARR potential before broader EPC expansion.

SOM

\$12M ARR

Serviceable Obtainable Market
Year 3 target

Conservative capture:

- 100 active projects
- \$10K average monthly revenue
- About 1% of SAM penetration

Achievable with founder network, vertical specialization, and first-mover AI advantage.

Market drivers: 43.4 GW planned 2026 solar capacity - IRA incentives - growing BESS complexity - generic tools leave solar-specific gaps

Founder-led sales through warm EPC network, then repeatable vertical SaaS motion

10

PHASE 1

Founder-Led Current - Q2 2026

Channels

- Warm outreach to 50+ EPC contacts
- LinkedIn + industry groups
- RE+ / Solar Power International attendance

Actions

- Schedule demos with pilot candidates
- Close first 3 pilot customers
- Document success metrics

Metrics

CAC: ~\$2K

Target: 3 pilots = \$30K MRR

PHASE 2

Crowdfunding Visibility Q3-Q4 2026

Channels

- OpenVC investor platform
- Wefunder campaign awareness
- Pilot referrals
- Industry webinars

Actions

- Convert investor leads to customer conversations
- Launch referral incentive
- Publish pilot case studies

Metrics

CAC: \$3K-\$5K

Target: 5-10 customers = \$60K-\$100K MRR

PHASE 3

Repeatable Sales 2027+

Channels

- Sales hire with EPC experience
- Partner ecosystem
- Trade show booth presence
- SEO + case studies

Actions

- Build demo -> pilot -> close process
- Establish channel partner program
- Scale to 2-3 sales reps

Metrics

CAC: \$8K-\$12K

LTV: \$360K+

LTV:CAC = 30:1 to 45:1

Early economics (founder-led phase): CAC ~\$2K | LTV \$360K+ | LTV:CAC 180:1 | driven by warm network + domain credibility

Generic GC tools and Excel workflows leave solar-specific execution gaps

11

Capability	Procore	P6	Buildertrend	Excel + Email	Meridian
Solar-specific workflows	No	No	No	No	Yes
AI schedule generation	No	No	No	No	Yes
AI inspection templates	No	No	No	No	Yes
Integrated closeout	Partial	No	Partial	No	Yes
Learns from project data	No	No	No	No	Yes
Field-ready mobile interface	Yes	No	Yes	No	Yes
Target customer	All GCs	All industries	Residential	Anyone	Solar EPC

Status quo is the real competitor

Most solar EPCs still use Excel + email + manual templates. Meridian replaces the fragmented operating layer, not just one software tool.

Generic tools fall short

Horizontal platforms do not understand NTP delays, COD risk, AHJ coordination, inverter commissioning, or EPC contract structures.

Vertical AI moat

Solar-specific workflows + AI automation + contractor learning loop create a data advantage that improves by project 3-5.

Solar EPC contractors pay Procore-level prices but receive little solar-specific intelligence. Meridian fills that gap.

Built by someone who has lived the solar EPC problem for 8 years

12

CHRIS FRYE

Founder & CEO - Meridian Field Command

Founder-market fit

15 years total construction experience
8 years in solar EPC execution
Quality management specialist who built QMS systems and inspection workflows
Lived the problem: manual schedules, lost RFIs, inspection chaos, closeout pressure

Why this founder can win

Meridian is not a generic project management tool adapted for construction. It is being built from real solar EPC workflows by someone who has managed field execution, quality documentation, contract requirements, and project handoff under real schedule pressure.

"I watched contractors lose money because their tools were not built for solar. Meridian is the platform I needed in the field."

Raising \$120K to convert pilots and validate repeatable revenue

13

\$120K

round size
Post-money SAFE

\$4M

valuation cap
Pre-seed structure

\$100

minimum
Wefunder investment

Q2-Q3

milestone
pilot to revenue

\$40K - Phase 3A Development

Admin module, PDF filing system, file storage, contracts, locations buildout.

\$30K - Customer Acquisition

Close first 3 pilot customers, onboarding support, demo materials, sales collateral.

\$30K - Founder Salary

3 months runway for full-time focus on pilots, product refinement, and customer onboarding.

\$20K - Infrastructure

Vercel, Supabase, Claude API, business office, services, and operating costs.

Success milestone: first pilot customers onboarded, pricing validated in live projects, and a repeatable onboarding playbook established.

LET'S BUILD THE FUTURE OF SOLAR CONSTRUCTION
