DEPCOM POWER // A KOCH ENGINEERED SOLUTIONS BUSINESS	Document #	Title	Revision	Released
	DPI-QA-SOP-0017	**Inspection Test Plan**	00	**10/29/25**

Originator	Approver
Melody Baeza, Quality Manager - QMS	**Elijah Richardson, Senior Quality Manager**

1. Purpose

The **Inspection Test Plan (ITP)** is established to standardize and control the inspection activities on EPC/BESS solar sites. Its primary purpose is to ensure that all critical quality requirements are systematically verified through documented inspections, both during initial setup (First Article Inspection – FAI) and ongoing quality checks. The ITP provides a clear, auditable pathway for confirming that project deliverables conform to contractual and regulatory standards, minimizing risk and ensuring consistent quality across all projects.

2. Scope

The ITP process applies to all inspections carried out on project sites, encompassing the following:

- Inspection Types: First Article Inspections (FAIs) and ongoing Quality Inspections
- Trades covered: Civil, Electrical, Mechanical, and High Voltage

3. Responsibilities

ROLE	RESPONSILITIES
Site Quality Managers	Import company-level inspection templates into projects Customize inspections to meet site specific requirement Notify the QMS of changes/improvements
Company Trade Subject Mater Experts	Review and approve inspection change requests ensuring compliance with trade requirements
QMS Team	Review change requests with SMEs for approval Maintain company-level inspection templates

4. Procedure

4.1. **Accessing the Company-Level ITP Template**

- In Procore, navigate to your project's Inspection tool
- Click the gear icon (top left) and select "Import Company Templates"
- Select all templates with the types "Quality" and "First Article"
- Click "Import Templates"

4.2. **Customizing the Project ITP**

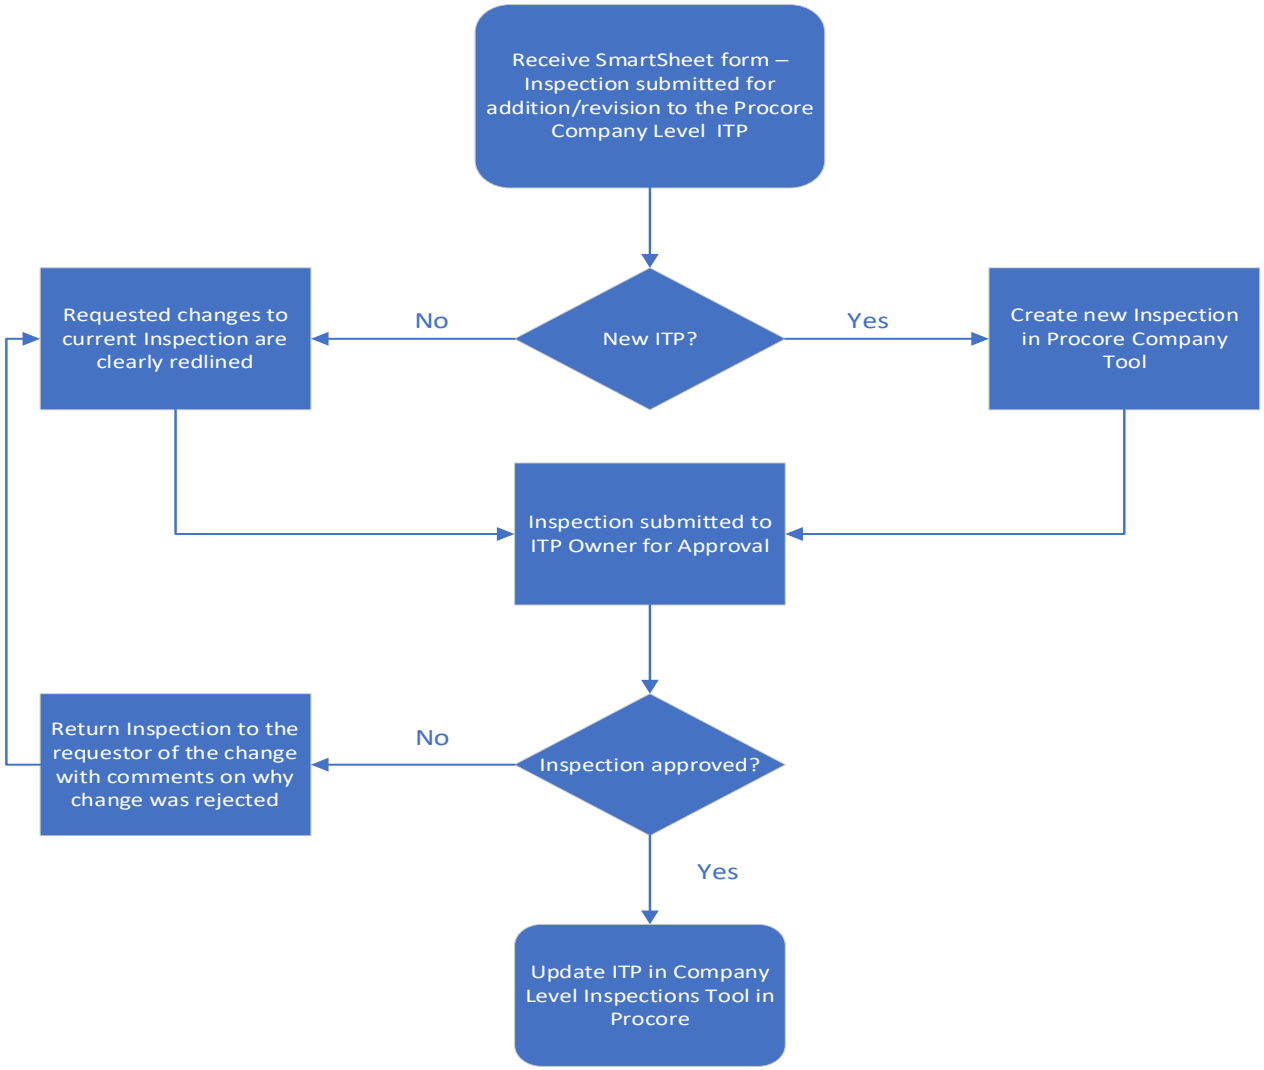

- Once the company level templates are imported into the project, the inspections can be edited
- Items with "Dimensions in Details" should be edited with site-specific tolerances, requirements, and unique conditions
- Inspections that are not needed per contract requirements can be deleted

- Additional inspection items can be added as needed to meet contract requirements at the discretion of the Site Quality Manager

4.3. Managing Changes to Company-Level Templates

- Please notify the QMS team of any changes or improvements to be made to the company-level inspection templates by submitting the Document/ITP Change Request Form found in the Company Level Documents folder on DEPCOM Net
- The form will be reviewed by the QMS team and routed to the appropriate trade capability owner for approval
- Approved changes are updated into the company-level template in Procore
- Please note: Site Quality Managers will need to re-import the updated templates to apply changes to their projects; previously imported inspection templates remain unchanged
